SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Artificial Intelligence and Data Science

ASSESSMENT TOOL 2 – Technical Presentation

Course Code:	DSA03	**Course Title:**	Natural Language Processing
CO Assessed:	CO1 – Imitation (L1)	**Assessment:**	Assessment Tool 2 – Technical Presentation
Weightage:	30% of CIA		
CO1 Statement:	Analyse NLP models, regular expression patterns, finite state automata, morphological processing techniques and to interpret language processing. (BL-3)		
Student Name:	B.Lakshmi Lohitha	**Reg. No.:**	192324182
Section / Batch:	AI-DS(2023-2027)	**Date:**	22-10-26

Code of Conduct

I B.Lakshmi Lohitha(192324182)(Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: B.Lakshmi Lohitha

Instructions

- Suggested Team Member Roles (3 Members)
- Member 1: Theory, Concepts, and Literature Review
- Member 2: Algorithm Design, Models, and Technical Analysis
- Member 3: Demonstration, Case Study, Applications, and Conclusion
- GPS photo must submit.
- Duration: 30 minutes.

Section / Topic	Focus	Q Nos
Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	NLP Models, Language Processing Evolution	TP-01
Comparative Study of NLP Models and Algorithms	Model Analysis, Algorithm Comparison	TP-02
Regular Expressions for Real-World Text Processing	Pattern Matching, Information Extraction	TP-03
Designing Efficient Regular Expression Patterns for Information Extraction	Text Mining, Data Extraction Techniques	TP-04
Finite State Automata in Natural Language Processing	State Transitions, Language Recognition	TP-05
Building a Finite State Automaton for Token Recognition	Lexical Analysis, Token Validation	TP-06
Morphology and Word Formation in Natural Languages	Morpheme Analysis, Word Structure Processing	TP-07
Inflectional Morphology: Understanding Grammatical Variations	Grammatical Analysis, Word Normalization	TP-08
Derivational Morphology and Vocabulary Expansion	Word Generation, Semantic Transformation	TP-09
Comparative Analysis of Inflectional and Derivational Morphology	Morphological Classification, Language Analysis	TP-10

Finite-State Morphological Parsing Techniques	Morphological Parsing, Finite-State Processing	TP-11
Morphological Analysis for Indian Languages	Language-Specific Morphology, NLP Challenges	TP-12
Porter Stemmer: Design, Working Mechanism, and Applications	Stemming Algorithms, Text Preprocessing	TP-13
Stemming vs Morphological Parsing: A Comparative Study	Word Reduction, Morphological Processing	TP-14
Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	End-to-End Language Processing Pipeline	TP-15

Annexure A – Technical Presentation

Team No.	Technical Presentation Title	Description
1	Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	Analyze the historical development of NLP models, key milestones, and how language processing has evolved from handcrafted rules to intelligent systems.
2	Comparative Study of NLP Models and Algorithms	Explore different NLP models and algorithms used for language processing, comparing their working principles, strengths, and limitations.
3	Regular Expressions for Real-World Text Processing	Demonstrate how regular expressions are used for data validation, text extraction, log analysis, and information retrieval in practical applications.
4	Designing Efficient Regular Expression Patterns for Information Extraction	Analyze complex regular expression patterns used to extract emails, phone numbers, URLs, dates, and structured information from unstructured text.
5	Finite State Automata in Natural Language Processing	Explain the concepts of deterministic and non-deterministic finite automata and their role in lexical analysis and language recognition.
6	Building a Finite State Automaton for Token Recognition	Design and demonstrate a finite state automaton that recognizes tokens such as identifiers, keywords, and numbers in textual data.
7	Morphology and Word Formation in Natural Languages	Investigate how words are structured and formed using morphemes, and analyze the importance of morphology in NLP systems.
8	Inflectional Morphology: Understanding Grammatical Variations	Examine how inflectional changes affect word forms based on tense, number, gender, and case across different languages.
9	Derivational Morphology and Vocabulary Expansion	Analyze derivational processes that create new words and study their impact on semantic interpretation and language understanding.
10	Comparative Analysis of Inflectional and Derivational Morphology	Compare the characteristics, applications, and challenges of inflectional and derivational morphology in NLP tasks.
11	Finite-State Morphological Parsing Techniques	Explore finite-state transducers and parsing techniques used to analyze and generate morphological structures in natural languages.
12	Morphological Analysis for Indian Languages	Study the challenges and solutions involved in performing morphological processing for morphologically rich Indian languages such as Tamil, Hindi, and Telugu.
13	Porter Stemmer: Design, Working Mechanism, and Applications	Analyze the Porter Stemming algorithm, its rule-based approach, implementation steps, and role in information retrieval systems.
14	Stemming vs Morphological Parsing: A Comparative Study	Compare stemming and morphological parsing techniques based on accuracy, computational complexity, and application scenarios.
15	Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	Demonstrate a complete NLP preprocessing pipeline incorporating regular expressions, finite state automata, stemming, and morphological analysis for text processing.

Rubrics for Calculation

Technical Presentation					
Criteria	**Weightage**	**Level 4 – Exemplary**	**Level 3 – Proficient**	**Level 2 – Developing**	**Level 1 – Beginning**
Technical Content Accuracy	30	Highly accurate, in-depth, and insightful technical explanation	Technically correct content with adequate depth and clarity	Basic concepts presented with limited accuracy and depth	Content contains major technical errors; concepts poorly understood
Problem Identification	25	Problem rigorously analyzed using appropriate and advanced methods	Problem clearly defined with a logical engineering approach	Problem identified but analysis or methodology is weak	Problem statement unclear or incorrect; no logical approach
Use of Tools	20	Advanced tools, well-analyzed data, and highly effective visuals	Appropriate tools and data used effectively with clear visuals	Limited use of tools and basic data interpretation	Minimal or incorrect use of tools and data; poor visuals
Communication	15	Highly engaging, confident, and audience-focused delivery	Clear, organized, and professional communication	Understandable but lacks clarity, structure, or confidence	Poor organization, unclear speech, ineffective slides
Professionalism	10	Exemplary professionalism, leadership, and ethical awareness	Professional conduct with effective team collaboration	Basic professionalism; uneven team participation	Lacks professionalism; minimal contribution or ethical awareness

Team No. / Criteria Level	Technical Content Accuracy	Problem Identification	Use of Tools	Communication	Professionalism	Total %

Regular Expressions for Real-World Text Processing

Pattern Matching • Information Extraction

PRESENTED BY
Name: B.Lakshmi Lohitha
Reg No:192324182

Introduction

What is Regex, and why is it useful?

- Regular Expressions are commonly called Regex.
- A Regex is a sequence of characters used to search for specific text patterns.
- It can identify words, numbers, email addresses, phone numbers and dates.
- Regex is widely used in Natural Language Processing (NLP) and text processing.
- It reduces manual effort and makes searching faster.

FIND

Locate text that matches a pattern.

EXTRACT

Collect matching information automatically.

VALIDATE

Check whether input follows a format.

Pattern Matching & Regex Symbols

Pattern matching checks whether text follows a specified pattern.

SYMBOL	MEANING	EXAMPLE
\d	Any digit	5
\w	Letter, digit or underscore	hello1
\s	Whitespace	space / tab
+	One or more occurrences	\d+ → 123
*	Zero or more occurrences	a*
^	Beginning of text	^Hello
$	End of text	end$

Example: \d+ can find numbers such as 123 and 4567 in a sentence.

Information Extraction

Automatically collect useful details from unstructured text.

INPUT TEXT

“Student Ravi scored 85 marks. Contact: 9876543210. Email: ravi@gmail.com.”

STUDENT NAME

Ravi

MARKS

85

PHONE

9876543210

EMAIL

ravi@gmail.com

Common uses: contact details • dates • ID numbers • important keywords

Note: Regex can extract structured patterns; names and meaning may need additional NLP methods.

Python Program

Aim: Extract numbers from a sentence using regular expressions.

```
import re

text = "My phone number is 9876543210"
numbers = re.findall(r"\d+", text)
print(numbers)
```

OUTPUT

['9876543210']

HOW IT WORKS

- import re loads the Regex module
- findall() returns all matches
- \d+ matches one or more digits

Result: The program successfully extracts the phone number.

Real-World Applications

Regex supports many everyday text-processing tasks.

01 Email validation

Check whether an email follows an expected format.

02 Phone extraction

Find phone numbers in messages and documents.

03 Text searching

Locate specific words or patterns in large files.

04 Document processing

Extract dates, invoice numbers and ID codes.

05 Data cleaning

Detect unwanted characters and inconsistent formats.

06 Form validation

Check user input before a form is submitted.

Advantages & Limitations

Regex is powerful for patterns, but it does not understand meaning.

ADVANTAGES

- Saves time on large text
- Automates information extraction
- Reduces manual searching
- Supported by many languages
- Useful for cleaning and validation

LIMITATIONS

- Complex patterns can be hard to write
- Incorrect patterns may miss information
- Does not understand sentence context
- Not suitable for every NLP task

Best practice: use Regex for clear patterns and NLP methods for context and meaning.

Conclusion

A simple and efficient way to find useful information in text.

- Regex is useful for pattern matching and information extraction.
- It identifies phone numbers, email addresses, dates and keywords.
- It makes text processing faster and reduces manual work.
- It is widely used in NLP, data cleaning and document processing.

Thank You!
